WINSTONE CRM

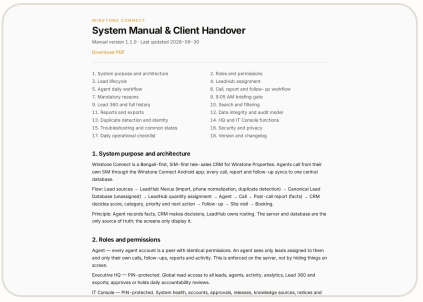

WINSTONE CRM — Client Handover & Feature Report

Document 1.1.0 · Audit date 2026-09-30 13:40 UTC (19:40 Asia/Dhaka)

Home — daily Top 3 board

Agent Desk

System Manual

1. What WINSTONE CRM is

A Bengali-first tele-sales CRM for Winstone Properties. Agents call customers from their own phone SIM using the Winstone Connect Android app; every call, report and follow-up is saved centrally so HQ sees the real picture.

2. Who uses it

User	What they can do
Agent	Call own assigned leads, submit post-call reports, manage own follow-ups, see own performance
Executive HQ	See every lead, agent and call; Lead 360; exports; approve daily accountability
IT Console	Accounts, approvals, system health, app releases, notices, audit
LeadHub Nexus	Import leads and assign quantities to agents

3. Features and how to use them

Home — daily Top 3 performers after 5:30 PM with score breakdown; countdown before that.

Agent Desk — own lead list, call button, pre-call brief with why the lead was assigned, WhatsApp tap-to-chat.

09:05 briefing — agents confirm the daily briefing once; calling is locked until they do.

Post-call report — six yes/no questions; CRM calculates Hot/Warm/Cold and priority. A reason is required when contact is closed; 'Other' needs a note.

Follow-ups — calendar, reminders before and after due time, reschedule with reason, full change history.

LeadHub Nexus — import from sheets/CSV, automatic phone cleanup and duplicate blocking, daily quota (50 by default) and per-agent assignment.

Executive HQ — live floor, Lead 360 search with filters, CSV and Print/PDF exports, accountability review.

IT Console — accounts and approvals, health check, releases, notices, manual and audit documents.

Reports — follow-up history, project reports by requirement, shift summaries at 12:50 and 5:30 PM.

Winstone AI — suggests answers and actions; nothing runs until a person confirms.

Sales Intelligence — AI Sales Brief from the lead's saved records; Smart Pitchbook with 11 objections, a recommended reply grounded only in published facts, Copy / WhatsApp (recorded as 'opened / message prepared', not sent) / Save; permanent Pitch History shown in Lead 360; Pitch Effectiveness by fixed rule (association, not causation); HQ/IT Knowledge Admin to verify, publish, expire and version facts and pitches. Market facts start empty — HQ must enter real, sourced facts.

4. Daily operating checklist

Morning: LeadHub assigns today's quantity → agents open the app and confirm the 09:05 briefing.

During the day: call → submit the report straight away → set follow-up or close with reason.

12:50 and 5:30 PM: shift summaries generate automatically.

5:30 PM: Top 3 appears on Home. HQ reviews accountability for agents above the pending threshold.

5. Troubleshooting

"Submit the previous report first" — finish the pending report; the next call unlocks.

"Acknowledge the 09:05 briefing" — tap the confirm button on the briefing card.

"Add your photo" — upload a clear staff photo on the web desk.

"This lead is not in your list" — only LeadHub can assign leads.

Numbers look wrong — open the lead in Lead 360; every event is listed with time and person.

6. Support and escalation

Agents → Sales Team Admin desk → IT Console team (TrendFlux OS IT). Business decisions and accountability approval → Executive HQ.

Not included: automated WhatsApp sending/billing (Business API not connected) and central telephony.
